Botswana

Train on the edge of reality and take your Advanced Equipment Simulator training to the next level with a Custom Mine Site.

Using your mine's own geological and survey data, the Immersive Technologies' Custom Mine Site team can create a virtual environment that simulates unique features of your site.

An Operator trained on a Custom Mine is more confident navigating and working in the actual site once training is complete, ensuring maximum productivity and safety from the moment they move into a real machine.

## Sites can feature you:

- Loading locations
- Dumping locations
- Buildings
- Signage
- Truck routes, and
- Landmarks

## **FOLLOW YOUR OWN RULES**

Your Custom Mine Site is a virtual replica of your actual site. The learning and retention rate of your Operators will be enhanced as they travel through their own mine site, in real time.

Advance your mines productivity and safety without risking injury to Operators or compromising real machines. Operators trained in a Custom Mine Site are more confident and assured of their ability once they step into an actual machine.

An Immersive Technologies representative will visit your site in order to identify your requirements and collect the data needed to create your Custom Site.

We also offer cost effective Custom Site Periodic Update Packages. This allows you to keep your Custom Site the same as your real site as it changes over time.

For information on how to get a Custom Mine Site for your AE Simulator or for a demonstration, contact Immersive Technologies today.
