

# LX3

*Medium Fidelity Simulator platform - built for high throughput training*

The LX3 is compatible with the wide range of machines simulated by Immersive Technologies and shares the underlying technology of the industry leading PRO4 and IM360-B.

MACHINE GROUPS SUPPORTED

## High Throughput Training

The LX3 is a cost-effective platform designed for early stage training, including control familiarization, site familiarization, machine start-up procedures and emergency response training, preparing trainees to transfer their knowledge and put it to effective use when entering the high-fidelity simulator environment.

The small footprint of this simulator makes it ideal for classroom-based multiple simulator installations and allows for comfortable group/trainer interaction.

## Wrap Around Display

An all new HD visual display system, built to provide a wide field of view to facilitate correct operations such as use of mirrors and checking for hazards at intersections.

## Conversion Kit Compatibility

Compatible with the same range of Conversion Kits as the PRO4, the LX3 enables additional utilization of Kits as part of a blended learning solution.

## Built-in Trainer Station

Offering a small footprint trainer station which is ideal for debriefing trainees post-session and early stage training to a large number of operators.
