

Remote Trainer Station

EXPECT RESULTS

Connect your simulator to the Remote Trainer Station, increase physical distance and maintain a quality 1:1 coaching environment.

Operator training drives behavioral change and performance improvement, but today's physical distancing requirements dampen the effects of one on one training. Immersive Technologies is expanding our efforts to keep your people safe while maintaining the high levels of learning engagement and knowledge retention that the mining industry knows us for.

Remote Trainer Station (RTS) introduces video conferencing facilities between your existing simulator cabin and a trainer desk located in a separate office*. RTS utilizes the same trainer friendly interface your trainers have become accustomed to.

Through two-way communication and monitoring functionality, trainers can continue to coach and train as if they were right next to the trainee

REMOTE TRAINER STATION INCLUSIONS

- ✓ Mini-PC, two monitors, keyboard and mouse
- ✓ Tablet display
- ✓ Microphone headset

SIMULATOR INCLUSIONS

- ✓ Tablet display
- ✓ Video camera
- ✓ Hand-free microphone

Remote Trainer Station includes additional hardware, software license upgrade, 12 month warranty, and remote support.

Remote Setup Available: Parts are couriered with detailed instructions and installation assistance available through video conferencing or phone.

The Trainer in a remote office location

- Can see and hear a video feed of the operator through an additional Tablet/Laptop screen while speaking through a headset.
- Can see a video feed of the Conversion Kit on the main Trainer Station.
- Will have the same views and user interface on the Trainer Station that they would normally have in the simulator. This will allow them to initiate training, perform administrative functions and do reporting remotely.

The Operator within the simulator

- Can see a video feed of the trainer on a tablet screen attached to the main simulation screen.
- Can hear the trainer through a speaker and speak to them through a hands-free microphone.

* **Note:** All supplied devices will be on the same network subnet and isolated from any corporate network. Additionally, the network cabling between the simulator and site office would need to be at least 100Mbps and have minimal latency (e.g. typical LAN environment). The customer needs to provide: The desk/location for the Remote Trainer Station, the networking cabling/infrastructure outside of the simulator and labor to install/setup the system under Immersive Technologies direction, should Immersive Technologies be prevented from accessing site.
