

- THE MOST REALISTIC DIGGING EVER
- BROADER JUMBO TRAINING SCOPE

The Most Realistic Digging Ever

Trainers can now configure digging material cohesion and resistance. Cohesion provides clumping behaviour while resistance can make the material harder or softer to dig.

When combined with existing material configurations options, trainers can create a wide variety of material types to specifically match their site conditions.

Virtual **Ground™** 3.0 continues to deliver the most realistic digging simulation on the market today.

Broader Jumbo Training Scope

Jumbo Drill functionality has been expanded even further to include:

- Five new simulated events
- Six new operator errors
- Five new assistants and benchmarking tools for guiding trainees
